## Classic 4 Program

Our Classic 4 program is recommended for clients who want to uphold the basic lawn care needs for a lesser-cost option. The four-visit program consists of the basic components a lawn may need relating to Fertilization, Broadleaf Weed Control, and Crabgrass Control. The program and application schedule is as follows:

### Visit 1 – Early Spring

Crabgrass Pre-emergent (1<sup>st</sup> app. of split application) w/ Fertilizer and Weed Control

### Visit 2- Spring

Crabgrass Pre-emergent (2<sup>nd</sup> app. of split application) w/ Fertilizer and Weed Control

### Visit 3- Fall

Fertilizer & Weed Control

### Visit 4- Late Fall

Winterizer Fertilizer w/ a \*Maintenance rate of Lime and Weed Control

\*Maintenance Rate only

## Platinum 6 Program

Our Platinum 6 program is our recommendation for clients who want their lawns to look their best throughout the season. This six-visit program consists of the essential materials any lawn will need relating to Fertilization, Broadleaf Weed Control, Crabgrass Control, Grub Control, Surface Feeding Insect Control, and Nutsedge control. The program and application schedule is as follows:

### Visit 1 – Early Spring

Crabgrass Pre-emergent (1<sup>st</sup> app. of split application) w/ Fertilizer and Weed Control

### Visit 2- Spring

Crabgrass Pre-emergent (2<sup>nd</sup> app. of split application) w/ Fertilizer and Weed Control

### Visit 3 – Early Summer

Grub Control Preventative w/ a Surface Feeding Insect Control and Weed Control (**Includes Nutsedge Control**)

### Visit 4 -Summer

Surface Feeding Insect Control and Weed Control (**Includes Nutsedge Control**)

### Visit 5- Fall

Fertilizer & Weed Control

### Visit 6- Late Fall

Winterizer Fertilizer w/ a \*Maintenance rate of Lime and Weed Control

***The 6 Visit Guarantee:*** Our 6 Visit Program guarantees control of your Weeds (Broadleaf, Nutsedge or Crabgrass), Grubs and Lawn Insects. If need be, we will return between visits to spot treat for any of the above at no charge\*. We will repair any parts of your lawn damaged by grub breakthrough activity. **However, we cannot guarantee lawns against damage caused by disease or drought.**

\*Maintenance Rate only

## Additional Lawn Care Services

**Lawn Aeration-** Annual aeration is beneficial to your lawn by reducing soil compaction and giving the grass a healthier root system as well as better water and fertilizer absorption, and reducing thatch build up. This service can be done spring or fall, but is recommended for the fall.

**Lawn Aeration & Overseeding-** Adding an overseeding to aeration will help thicken the lawn and improve any thinning areas. By cultivating the soil with aeration, the results of seeding will greatly improve as opposed to just spreading seed over the lawn. This service can be done spring or fall, but is highly recommended for the fall.

**Soil Test-** A soil sample is taken from the lawn area and sent to Penn State Agricultural Analytical Lab for analysis. The customer will receive a copy of the results, which will include the pH level of the soil and any nutrient needs. The pH level is the most important factor from this test for growing a healthy lawn.

**Corrective Lime Application-** The lime application that is provided with our programs is a yearly maintenance rate of lime only. If the results of a soil test shows the pH is improperly balanced, an additional application will be needed.

**Grub Control (Preventive)-** Of all the insects that can pose a problem on your lawn, grubs are predominantly the most destructive and common. They can destroy a lawn in a short period of time in the fall if not treated with a proper preventative grub control. **\*Included in Platinum 6 Program**

**Grub Control (Corrective)-** If grubs become an issue in your lawn, we offer an application to eliminate them and stop the infestation from spreading. Please note: this application will **NOT** repair the damaged areas and the areas might appear slightly larger after application. Grubs feed on the roots of grass and can take a few days to show damage response from their feeding. Many times aeration and seeding will need to be added after this application to repair the damage from grubs.

**Nutsedge Control-** Nutsedge is becoming a more common weed that will start to emerge late spring and grow throughout the summer months. Selective herbicides will be used to control nutsedge. This weed is very persistent, so we will revisit the lawn one month after initial application to repeat treatment should the weed regenerate and appear again. (No additional charge) **\*Included in Platinum 6 Program**

**Outdoor Perimeter Pest Control-** Our perimeter pest control program provides a barrier that will protect your home from crawling insects such as spiders, earwigs, ants and centipedes. Because most problems start on the outside, we pay special attention to areas around your home that provide easy access such as foundation cracks, window wells, and door thresholds.

**Flea/Tick/Ant Outdoor Control-** This service provides three additional applications to your lawn from spring through fall to help protect your family and pets from parasitic fleas, ticks and also ant mounds from disturbing your lawn and keeping them out of your home.

**Mole/Vole Control-** Mole tunnels can be very devastating to your lawn as well as vole damage to your trees, lawn and landscape beds. Our program is designed to attack the problem by using repellants, baits & bait stations. We will visit your site monthly for the first three months, and then begin our monitoring phase by visiting every three months until there is no longer an issue.

**Mosquito Program-** Mosquitoes carry many diseases and are a major nuisance for people who love spending time outdoors. Monthly visits throughout the year will greatly help control mosquito and gnat populations on your property. (April through October)

**Mosquito Treatment-** This service consists of two visits to control mosquitoes and gnats for special events such as, outdoor weddings, parties, or other outdoor events. (Please call to schedule at least 2 weeks in advance)
