

The Classic Program Free Soil pH Monitoring	
March thru April	Early Spring fertilizing replenishes nutrients lost over the Winter and returns the lawn to a lush green color.
	Applying crabgrass preventer now avoids ugly crabgrass in the lawn during the Summer.
	Broadleaf weed control (weather permitting) to control early season weeds.
July thru August	Balanced slow released non-burning fertilizer designer to help your lawn through the Summer stress periods.
	Surface insect control protects the lawn from insects such as chinch bugs and sod web worms.
	Broadleaf weed control applied as needed to control any leftover Summer weeds.
September thru October	Fertilizer provides essential nutrients directly into the plants for the Fall growing season.
	Broadleaf weed control to manage late season weeds.

The Fairway Program Free Soil pH Monitoring	
March thru April	Early Spring fertilizing replenishes nutrients lost over the Winter and returns the lawn to a lush green color.
	Applying crabgrass preventer now avoids ugly crabgrass in the lawn during the Summer.
	Broadleaf weed control (weather permitting) to control early season weeds.
May thru June	Fertilizer goes directly into the plant system to strengthen the grass and resist Summer stress.
	Controls Summer weeds such as dandelions.
	We will apply a pre-emergent grub preventative in the late Spring / early Summer to prevent grubs from devastating your lawn. Grubs are the larvae of beetles, and are the most widespread and destructive pests in the Northeastern United States.
July thru August	Balanced slow released non-burning fertilizer designer to help your lawn through the Summer stress periods.

	Broadleaf weed control to manage late season weeds.

Additional Services	
Core Aeration & Seeding Program	<p>Did you know: professional golf course greenskeepers have known that the secret to a beautiful, dense turf is to aerate their course two or three times each year, allowing the healthy grassroots to thrive.</p> <p>Benefits of Aeration & Seeding:</p> <ol style="list-style-type: none"> 1. Fills in bare spots to provide a thick, green lawn 2. A thick lawn will help to choke out weeds and crabgrass. 3. Aeration helps to loosen and de-compact your soil which allows water, air and nutrients to flow to the root system.
Grub Control Program	<p>We will apply a pre-emergent grub preventative in the late Spring / early Summer to prevent grubs from devastating your lawn. Grubs are the larvae of beetles, and are the most widespread and destructive pests in the Northeastern United States.</p> <p>They damage grass by chewing on the root system, undermining even the healthiest of landscapes. Our grub control applications are guaranteed for the year.</p>
Lime Applications	<p>We test your soil pH for free to determine the amount of lime and number of applications needed to properly balance your pH.</p> <p>Raising your soil pH to be balanced will help the lawn because:</p> <ol style="list-style-type: none"> 1. Lime improves the effectiveness of the fertilizers we put on your lawn. 2. Prevents germination of some weeds 3. Helps to prevent the buildup of thatch and grass clippings <p>In short, better soil yields better grass. Please note that lime can be applied any time during the year.</p>
Perimeter Pest Program	Our perimeter pest control provides an invisible barrier that will protect your home from crawling insects such as spiders, earwigs, ants and centipedes. Because most problems start on the outside, we will pay special attention to areas around your home that provide easy access such as foundation cracks, window wells and door thresholds. Our annual program will provide 4 professional and timely treatments to protect your home.
Flea & Tick Lawn Service	Our Flea & Tick Program will provide 3 lawn applications from Spring through Fall to help protect your family and pets all season long from dangerous insects on your lawn.

The Tournament Program Free Soil pH Monitoring	
March thru April	Early Spring fertilizing replenishes nutrients lost over the Winter and returns the lawn to a lush green color.
	Applying crabgrass preventer now avoids ugly crabgrass in the lawn during the Summer.
	Broadleaf weed control (weather permitting) to control early season weeds.
