

## Disinfecting Services Prep Sheet

Disinfecting Services are to complement what is already being done in a facility. The service includes physical, wiping down of all surfaces that hands can touch: desk tops, all office equipment, light switches and more. The second portion of the service includes a broadcast application deep cleaning with the ULV machine (Ultra Low Volume). The product that we use is an EPA regulated product listed on List N, Registration #10324-80. This product does kill the SARS-CoV-2, the cause for the Covid-19 and other concerning viruses. If you prefer we can perform the broadcast application without the surface application if your facility already has in-house cleaning for surfaces.

Occupants must vacate the inside of properties that we are treating for 2 hours after application is complete. The product must dissipate and dry and after 2 hours life can return back to normal.

### Prep Checklist:

1. Turn all computers off
2. Clear off all desk tops, counter tops and tables
3. Remove any food items
4. Remove any items that go into the mouth (such as dishes, tooth brushes, etc...)
5. Place all toasters, coffee machines and dishes in a cabinet or enclosed space.
6. Remove pet bedding from rooms and wash them in hot water and dry; place back in room 2 hours after treatment
7. Cover all fish tanks, animal cages and remove birds and bird cages from areas to receive treatment.
8. Aquariums may remain in place as long as the filtration and aeration systems are turned off and the tank covered with wet towel. Filtration and aeration equipment can be turned back on in 2 hours after disinfecting.
