

**ROACH PREP SHEET FOR INITIAL AND FOLLOW-UP SERVICES**

These instructions should be followed for all visits for an effective service:

1. Please make sure that all dirty dishes, pots & pans are cleaned and put away before each service. Declutter the counter tops in the kitchen and bathrooms.
2. Please make sure we have at least 2 feet of access to all wall areas. If the items are not movable we will try to work around them the best we can.
3. In the bathroom area, put the soap & toothbrushes in Ziploc bags and seal them. If there is a closet or vanity, take the items out and put in the tub. They can be put back when you return.
4. If there is a fish tank, please shut off filters & air pumps and make sure it is covered with a wet towel. If you have other pets, they would need to be out with the initial service for 2 to 3 hrs. On the monthly services, the pets do not need to be out.
5. If anyone is pregnant-they need to check with their doctor and be out of the house for 4 to 6 hours after we have treated. The rest of the family needs to be out 2 or 3 hours. On the monthly services you would not need to be out. The pregnant person would still have to be out. Any infants that are under 6 months would need to be out for 2 to 3 hours with each service.

**WHAT TO EXPECT AFTER THE SERVICE:**

It takes six months to eliminate German roaches based on their life cycle span. Live roaches will be sighted up until the 6th service. After the 1st and 2nd service you can expect an increase of live roaches as the products are formulated to agitate the roaches and draw them out of hiding harborages. After the 3rd service there will be less roaches but the roaches remaining will be seen more often because they eat often since our products stimulate their metabolism.
